

Brain Model Error Tracking Report

Total Episodes: 1000

Final Reward: 35.00

Peak Reward: 85.00

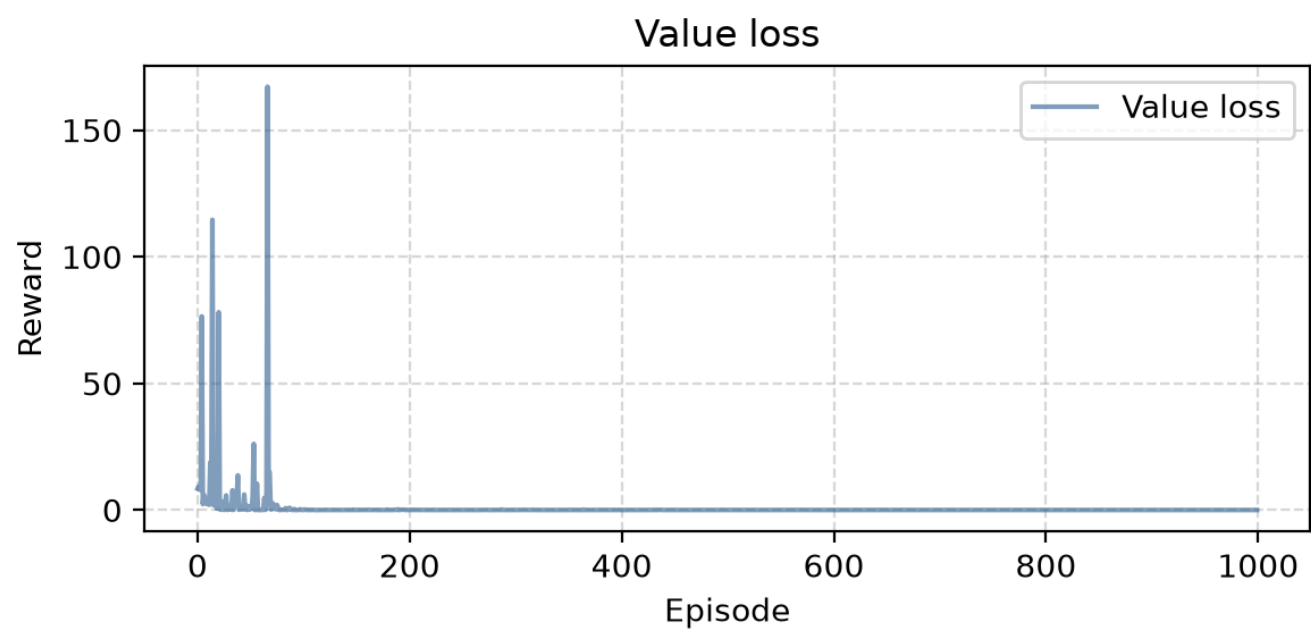

1. Learning Performance

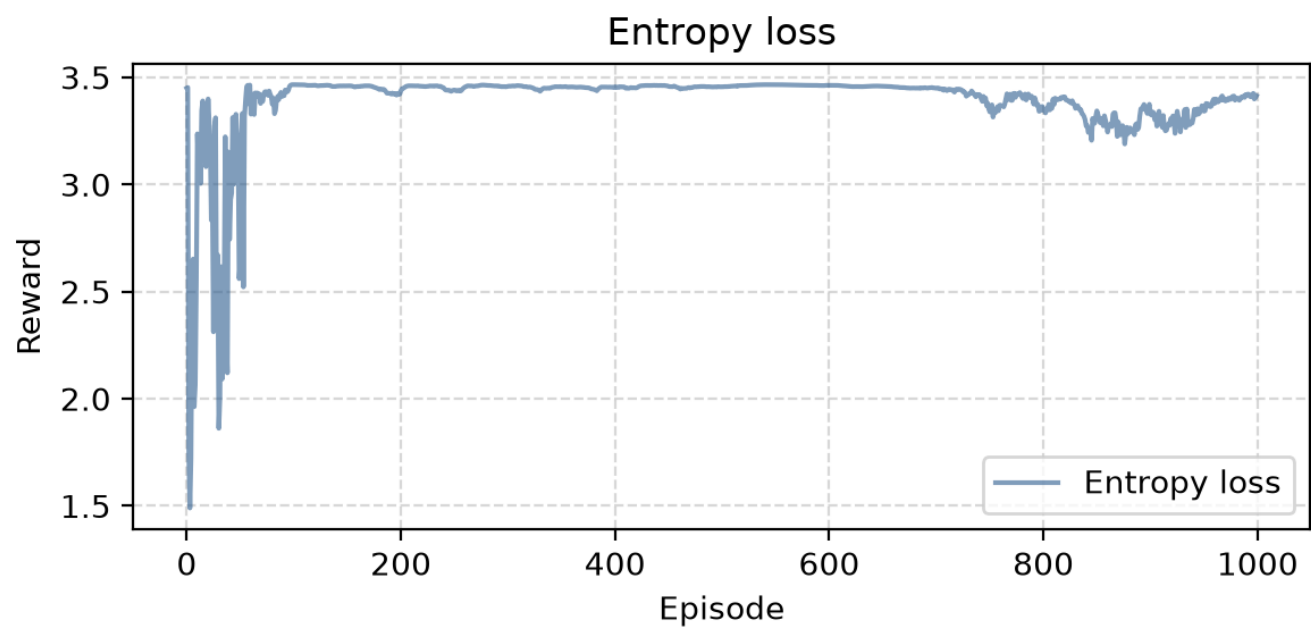

2. Actor loss

3. Value loss

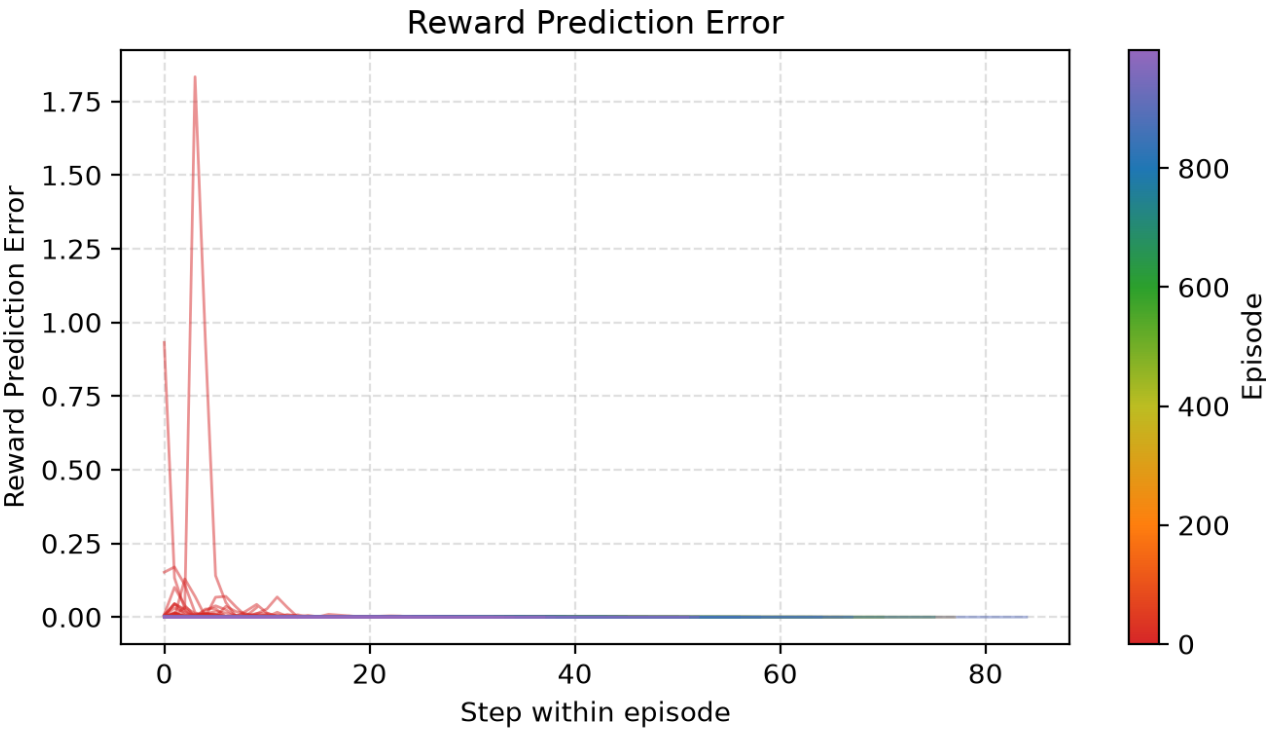

4. Entropy loss

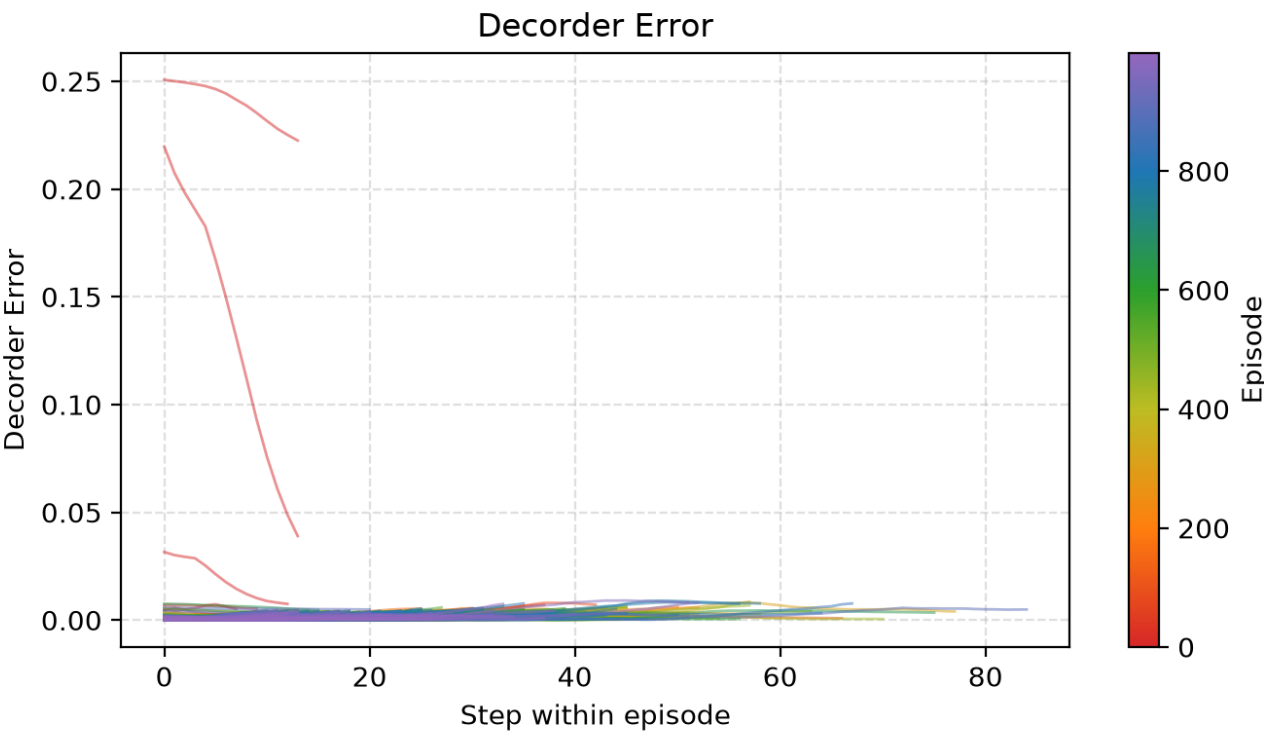

5. Reward Prediction Error

The plot shows the error in prediction the reward as time progresses for each episode. The color coding represents the passage of episodes

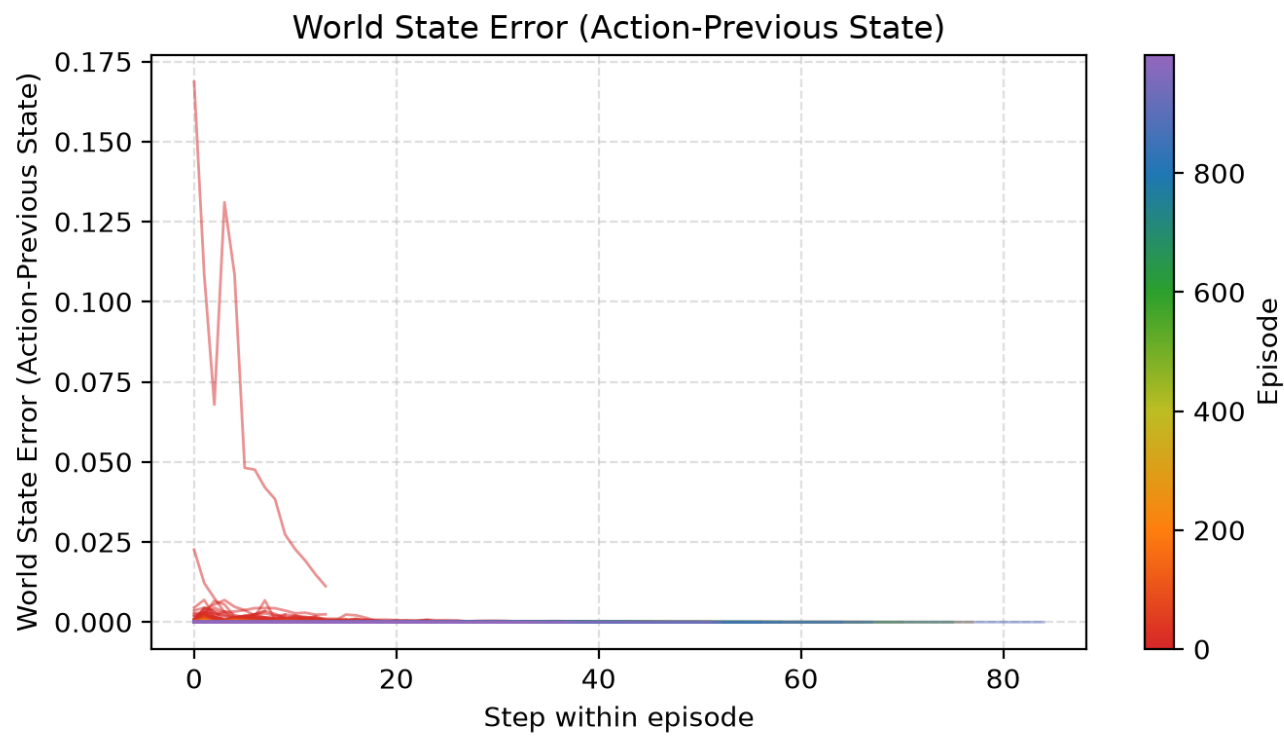

6. Encoder-Decoder Error

The plot shows the error in transforming the latent space into the real world observation. The color coding represents the passage of episodes

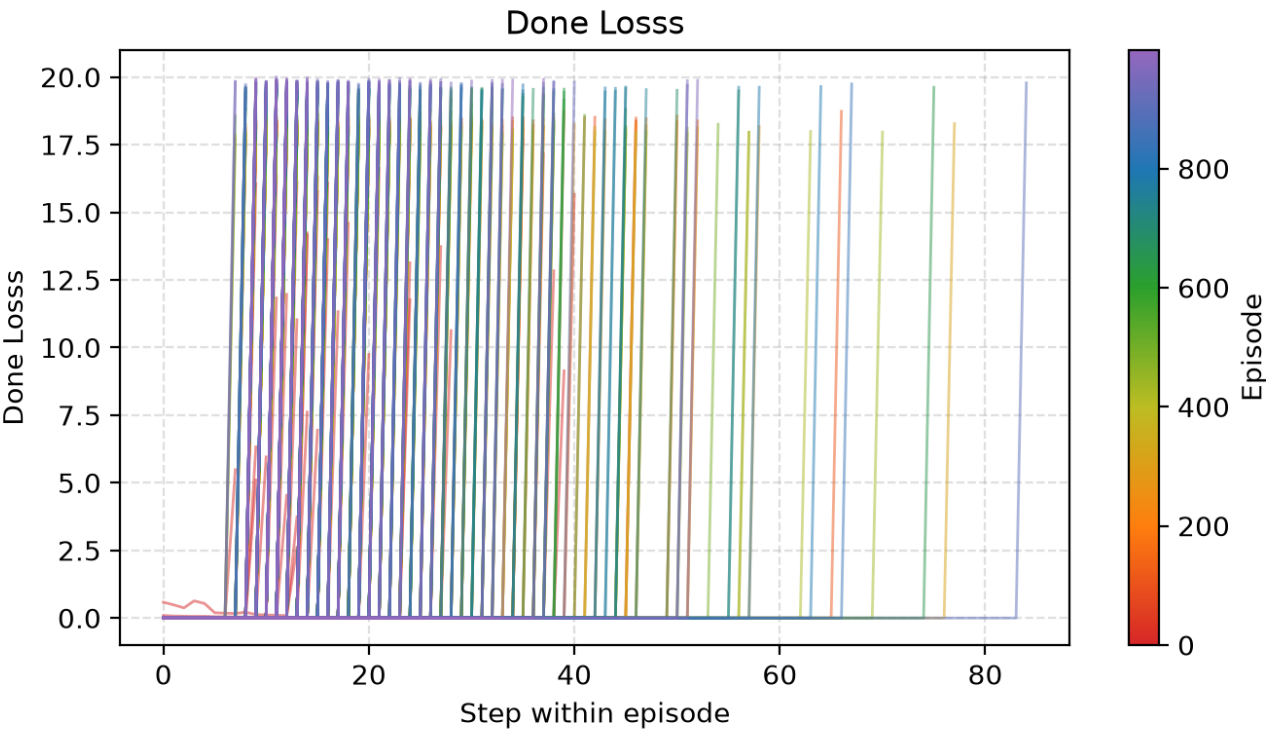

7. Predicting World State from Action-Previous State

The plot shows the error in predicting the next latent spate (condensed world representation) given the action and the previous world representation. The color coding represents the passage of episodes

8. Predicting Termination of Game

The plot shows the error of the model in predicting termination. The color coding represents the passage of episodes

9. Replicated Behavior (Evaluation Rollout)
